

Application Instructions Simix- Oxi Shine Multi-Surface Protector

Mixing Instructions:

Product must be shaken prior to each use to suspend the TiO₂ Self Cleaning NP Technology particles.

Surface Preparation:

Remove all loose dirt, stains, old waxes and polishes. Use Oxi One All Purpose Cleaner following instructions on the container for final cleaning.

Note:

Do not begin application of the product unless you are satisfied with the overall appearance of the surface to be treated. The Oxi Shine forms a bond that becomes a permanent part of the treated surface.

Application:

1. Turn nozzle on the trigger to Spray.
2. Lightly spray some product onto an applicator pad or on the surface.
3. Lightly spray 6 – 8 inches from surface and thoroughly wipe area with the applicator pad using a back and forth up and down motion to spread a thin layer of the product onto the surface. Less is more, so thin is best.
4. Immediately wipe off and lightly buff the surface with a dry Micro Fibers Cloth. Do not leave product on the surface for more than one minute before buffing. It is recommended to do no more than a 2 X 2 foot area at a time.
5. Never apply to surfaces that are extremely hot as the product will rapidly set and make for difficult buffing. If product sets, quickly add product and buff immediately with little or no time in between the application and buffing.
6. Product is Water Based and should not be applied when surface temperatures are below 40F.
7. It is recommended that you rebuffer the surface with a dry Micro Fibers Cloth 20 minutes after application on Glass surfaces to eliminate any excess material that may not have bonded.

After Application Maintenance:

1. Clean with a damp cloth and immediately buff with a Micro Fibers Cloth.
2. Only reapply product to surfaces that no longer have a smooth slick feel.
3. If desired, apply product every 30 days to create a lacquer like look.
4. Never use products that contain Bleach or Ammonia to clean as they will damage the overall appearance.
5. For a daily maintainer on Glass it is recommended that you put two ounces of the product in a 32 oz spray bottle and fill the balance with Water. Thoroughly shake and you are ready for a light spray and buff to remove Finger Prints from all surfaces.
